MyDrive- Product Backlog

Features

1.We are secure:-

At the time of registration , the user is asked to provide his credentials (aadhar , voter card etc) , so that he can reached in case of any emergency

2 . We are transparent :-

The user whose car is rented is provided with the total information of who has taken the car for rent .

3 . We are Smart:-

Our cars are provided with real time tracking system ,

which allows us to know where the car is now .

4 . We are aware :

Since we are tracking the cars , any damage to the car or

a chance to run away with the car, isn't possible

Technical Requirements:

Use of MySQL - For building and storing the database used in the app.

Use of J2EE Environment - For developing Android supported Application

Use of Google Map API - For tracking the cars in the real time .
